### Unit 3, S14, SLO1 - Inserting an Element into the Priority Queue

**Fill in the Missing Programming Code for Priority Queue insert():**

```
Answer: struct node *insert(struct node *start) {
    int val, pri;
    struct node *ptr, *new_node;
    new_node = (struct node *)malloc(sizeof(struct node));
    printf("\nEnter the value and its priority : ");
    scanf("%d %d", &val, &pri);
    new_node->data = val;
    new_node->priority = pri;
    if (start == NULL || pri < start->priority) {
        new_node->next = start;
        start = new_node;
    } else {
        ptr = start;
        while (ptr->next != NULL && ptr->next->priority <= pri)
            ptr = ptr->next;
        new_node->next = ptr->next;
        ptr->next = new_node;
    }
    return start;
}
```
