Unit 3, S9, SLO2 - Types of Queues - Matching

Match the Types of Queues with their correct characteristic:

- A. Linear Queue
- B. Circular Queue
- C. Double-Ended Queue (Deque)
- D. Input-Restricted Deque
- E. Output-Restricted Deque
- F. Priority Queue
- G. Simple Queue
- H. Static Queue
- I. Dynamic Queue
- J. Circular Deque
- K. Single-Ended Queue
- L. Blocking Queue
- M. Non-blocking Queue
- N. Monotonic Queue
- O. Queue of Queues

Answer: A - 2 (Basic FIFO structure)

B - 13 (Last position connects to the first, wrapping around)

C - 11 (Insertion and deletion at both ends)

D - 9 (Deletion at both ends, insertion at one end only)

E - 12 (Insertion at both ends, deletion at one end only)

F - 10 (Elements served based on importance/priority)

G - 15 (Insertion at rear, deletion at front)

H - 3 (Fixed size queue implemented using arrays)

I - 1 (Grows or shrinks dynamically using linked list)

J - 14 (Ends are connected circularly and operations at both ends)

K - 8 (Operation allowed at only designated ends)

L - 5 (Used for thread communication, blocks on full/empty)

M - 7 (Does not wait, returns status immediately)

N - 6 (Maintains elements in increasing or decreasing order)

O - 4 (Nested queue structure with queues as elements)
