Unit 2, S1, SLO1 - Fundamentals of Arrays and their Operations

1. An array is a collection of elements stored in ____ memory locations.

Answer: contiguous

2. The index of the first element in an array is usually ____.

Answer: 0 (zero)

3. To access the 5th element in an array named arr, we use ____.

Answer: arr[4]

4. The operation to add an element at the end of an array (in dynamic arrays) is called ____.

Answer: append / push_back

5. The process of finding the position of an element in an array is known as ____.

Answer: searching

6. Inserting an element in the middle of an array requires ____ the elements.

Answer: shifting

7. Arrays in C are declared using the ____ operator followed by the size in square brackets.

Answer: subscript ([])

8. A ____ array has two dimensions and is often used to represent matrices.

Answer: 2D (two-dimensional)

9. Arrays store elements of the ____ data type.

Answer: same (homogeneous)

10. The number of elements an array can hold is known as its ____.

Answer: size / capacity

11. Arrays can be ____ or multi-dimensional.

Answer: one-dimensional (single-dimensional)

12. The operation to remove an element from a specific position in an array is called ____.

Answer: deletion

13. In C, the array index must always be a(n) ____ value.

Answer: integer

14. Arrays are ____ in size once declared in static programming languages like C.

Answer: fixed (static)

15. A loop commonly used to traverse an array is the ____ loop.

Answer: for loop
