Unit 2, S2, SLO2 - Traversal and Searching in an Array

Algorithm for array traversal

Step 1 : [INITIALIZATION] SET I= _____

Step 2 : Repeat Steps 3 to 4 while I <= _____

Step 3 : Apply Process to _____

Step 4 : SET I = _____

[END OF LOOP]

Step 5 : EXIT

Answer: Step 1: SET I = 0 (or lower_bound)

Step 2: while I <= upper_bound (or N - 1)

Step 3: Apply Process to A[I]

Step 4: SET I = I + 1

Step 5: EXIT

1. To access each element of an array, we use a _____.

Answer: loop (or index subscript)

2. Array traversal typically starts at index ____.

Answer: 0

3. The last index of an array with n elements is _____.

Answer: n - 1

4. While traversing an array, we must ensure the index does not go out of _____.

Answer: bounds (range)

5. If we want to traverse an array in reverse, we start from index ____.

Answer: n - 1
